

Bi-fold doors make excellent room dividers between the main house and say a conservatory. With our system the bottom guide is only 40mm thick and providing this is allowed for in the construction, this can then be let into the floor and you end up with an almost level threshold between the two rooms as per the photo below.

Why not open up your home to the garden and patio, invite the great outdoors in to your home in the summer, and in the winter, shut it firmly out?

One moment, Bi-fold doors are acting as an effective, secure barrier from rain, wind and noise. The next they are effortlessly moved aside to reveal a wide open space - with no fixed glass panels or posts...

Timber options are any hardwood including Oak, Sapele, or Maple

The finest Bi-fold doors you can buy, in new sustainable timber!

Large number of home owners have lived with the 70's type of aluminium sliding patio doors, which in their day were fine. New design and technology of Bi-fold doors has moved forward to enable you to have beautiful natural timber doors that are highly draft resistant, coupled with double glazed units that will keep the heat in and the cold out.

Brookdown Joinery manufacture bespoke bi-fold doors individually, and to your exact requirements. Door sets can be delivered anywhere in the country. The doors and frame are fully assembled in our joinery works and tested for smooth operation. If they are 2 metres width or less, these will be delivered fully assembled (except glass). For larger sizes up to 6 metres width, once the door set has been tested, the frame will be dismantled with all joints clearly marked, ready for reassembly on site. Providing the brick opening is square the door set can be fitted by any competent carpenter or even an experienced DIY person. There is a help line available during normal working hours on **023 9241 3651**.
